9. Accomplishment Instructions.

PROPELLER REMOVAL

Date : WO Number :
Part No. Propeller : 4HFR34C778- A/C Total Hours :
Serial No. Propeller : A/C Total :
Landing
Propeller Time : TSN: TSO:
Removed from A/C Reg. :

Description	Eng.	RII	Remarks
A. REMOVE PROPELLER (Refer to Figure 01 to 04)			
1. Make sure the airplane propeller control lever has the FEATHER position selected and the propeller blades are in feather.			
NOTE: If the propeller control lever is not in the FEATHER position or the propeller blades are not in feather, consult the Pilot's Operating Handbook for instructions to put the propeller control in the feather position and to feather the propeller.			
2. Place a drip pan under the propeller mounting surface to catch any spilled engine oil when the propeller is removed.			
3. Remove the feedback bearing assembly from the feedback collar groove. Refer to the aircraft or engine manual for procedure.			
4. Remove the cowling as required for access to the mounting nuts.			
5. Remove the cowling as required for access to the mounting nuts.			
NOTE: Make sure the rods are inserted through the correct holes of the tool. The beta rods must be pulled directly forward.			
CAUTION: Do not draw the feedback collar too far forward as the beta rods will be damaged			
6. Turn the large threaded rod of the retractor tool clockwise to draw the feedback collar forward to allow access to the propeller mounting nuts.			
7. Break the torque on the propeller mounting nuts. (McCauley Torque Wrench Adapter part number B-5588 may be used to gain easier access to mounting nuts.)			
8. Install propeller sling and attach to hoist. If hoist is unavailable, propeller may be supported and lifted by hand. This will require

ENGINEERING ORDER**

additional personnel.

CAUTION: The C700 propellers weigh approximately 120 pounds (54 kg), the C750 propellers approximately 140 pounds (64 kg). CI1000 series propellers weigh 180 pounds (83 kg) or more

- A. Hoist straps must be a minimum of 4 inches {100 mm) wide
- B. The sling and hoist should have a weight limit rating at least twice the weight of the propeller that is to be removed.
- C. The straps of the propeller sling should be placed on two of the propeller blades at least 6 inches (152 mm) outboard of the propeller hub. Make sure you protect the deice boots or anti-ice shoes from potential propeller sling abrasion damage, if installed.
9. Take up the slack on the propeller sling and hoist, or have additional personnel support the propeller, and remove the nuts.
10. Carefully slide the propeller forward and remove from the engine
11. Place the propeller on a suitable support or propeller stand
 - a. Do not let the propeller be supported by the tips of the propeller blades or "stand" the propeller on the propeller blade tips
 - b. The stand should be able to hold the propeller securely and have a weight limit rating at least twice that of the removed propeller.
 - c. Make sure the propeller is protected from damage while in the stand. All areas of the stand that come in contact with the propeller should be padded sufficiently to prevent abrasion damage to the propeller.
12. Install a protective cover over the propeller hub mounting flange.
13. Install a protective cover over the open end of the engine propeller flange.
14. Remove the D-5945 feedback collar retractor tool from the propeller.

PROPELLER INSTALLATION

Date : WO Number :
Part No. Propeller : 4HFR34C778- A/C Total Hours :
Serial No. Propeller : A/C Total :
Landing
Propeller Time : TSN: TSO:
Install to A/C Reg. :

Description	Eng.	RII	Remarks
B. INSTALL PROPELLER (Refer to Figure 01 to 04).			
NOTE: McCauley recommends that the propeller mounting nuts (McCauley part number A-1639-32) be replaced at each propeller installation, whenever possible. However, nuts may be reused if the locking material prevents turning of the nut on the stud by hand.			
1. Install the D-5945 feedback collar retractor tool on the propeller.			
2. Remove protective cover from the end of engine propeller flange.			
3. Make sure the flange is clean and free of nicks and burrs.			
4. Make mounting sure stud that the holes are engine clean, propeller dry, and flange, free of dowels, nicks and and burrs.			
5. Remove protective cover from the propeller hub mounting the flange.			
6. Make sure and that the propeller studs hub mounting flange, dowel pin holes, are clean mounting and, undamaged.,			
7. Make sure that a new O-ring is installed in the groove of the propeller hub mounting flange. Lubricate the O-ring with engine oil prior to installation of the propeller. NOTE: Refer to the Installation Parts For Turbine Engine Propellers, Table 1002 for the O-ring part number. NOTE: In the past, new propeller assemblies shipped from McCauley, the propeller hub/engine O-ring was installed in the O-ring groove of new propellers and hub assemblies. This practice has been discontinued. The O-ring is now included in the propeller unattached parts kit, which is included in the box with the propeller or hub assembly. Install the O-ring according to the assembly instructions in this Owner/Operator Manual.			
8. Use a propeller sling and hoist, or additional personnel, to position the propeller close to the engine propeller flange and align engine

Rev. Date 10 Apr 2023

**SMART AVIATION
ENGINEERING ORDER**

flange dowel pins with the dowel pin holes on the propeller hub mounting flange. Rotate engine propeller mounting flange as required to align the dowel pin holes.

- A. Hoist straps must be a minimum of 4 inches (100 mm) wide
- B. The sling and hoist should have a weight limit rating at least twice the weight of the propeller that is to be installed.
- C. The straps of the propeller sling should be placed on two of the propeller blades at least 6 inches (152 mm) outboard of the propeller hub. Make sure you protect the deice boots or anti-ice shoes from potential propeller sling abrasion damage, if installed.

CAUTION: Propeller must be installed straight onto the engine flange. Any rocking of the propeller with respect to the flange could result in damage to the engine/propeller flange mating surfaces.

- 9. Mount the propeller on the engine propeller shaft.
- 10. Make sure the alignment mark on the spinner aft bulkhead and the propeller blade with are in alignment.
- 11. Ensure threads of nuts and studs are free of burrs, nicks, and similar damage, and clean of foreign material.

CAUTION: Do not use oil as a substitute for approved lubricant. It is imperative that the correct specification of lubricant be used during installation. Substitution of the approved grease with an unapproved lubricant { or no lubricant) could result in undertorquing or severe over-torquing of propeller attaching parts.

- 12. Lubricate the threads of studs and nuts and the faces of nuts, spacers, or washers with MIL-PRF-83483 (McCauley part number A-1637-16) grease.
- 13. Install mounting nuts on mounting studs.
- 14. Torque the mounting nuts in an alternating sequence to prevent the hub rocking on the engine flange.

- 15. When the hub is seated fully on the engine flange, torque to the specification called out in the mounting decal located on propeller hub at the number 1 socket.

NOTE: If the decal containing the propeller installation instructions is missing or illegible, install a new decal. All Pratt & Whitney engine installations, use a part number A- 2230-7 decal. The A-2230-7 decal specifies a lubricated 68 to 72 foot-pounds (92.196 to 97.619 N-m) torque.

- 16. After you apply the final torque, apply torque seal to nut and stud threads.

- 17. If required, install the deice leads.

- 18. McCauley Torque Wrench Adapter:

TECHNICAL SUPPORT
TECHNICAL DEPARTMENT
ENGINEERING ORDER

Rev. No Original

Rev. Date 10 Apr 2023

**SMART AVIATION
ENGINEERING ORDER**

CAUTION: If an adaptor or extension (such as McCauley part number B-5588) is attached to torque wrench drive end and this adds to its length, then the actual applied torque will be greater than the dial reading. The following formula should be used to find what the dial should read in order to obtain the correct applied torque:

$$\text{Dial Reading} = \frac{\text{Torque Wrench Length} \times \text{Desired Torque}}{\text{Torque Wrench Length} + \text{Extension Length}}$$

19. Remove the D-5945 feedback collar retractor tool from the propeller

20. Make sure of proper rigging of engine controls. Refer to aircraft maintenance manual or STC maintenance manual supplement.

a. Feather, reverse, and low blade angles are set during assembly or overhaul. These angles are NOT adjustable in the field.

CAUTION: Do not operate the propeller below the minimum propeller idle speed operating restriction. The minimum propeller idle speed operating restriction is the result of a specific vibratory resonant condition known as "reactionless mode". Ground operation, at or near a reactionless mode vibratory resonance speed, can cause very high stresses in the propeller blades and hubs. These high stresses are more severe when operating in a tail-wind condition. If the propeller is operated within a restricted RPM range or below a minimum RPM restriction for an extended period of time, the propeller blades and hubs may become unairworthy due to fatigue. Hub or blade failure has the potential of causing a catastrophic event due to blade separation. The propeller RPM restriction is often placed below the minimum idle RPM; however, certain aircraft have a restriction that is above the propeller idle RPM setting. Either restriction is important. The propeller operating restrictions or limitations may be found in the Airplane Flight Manual (AFM) or Airplane Flight Manual Supplement (AFMS). The propeller installations may be controlled by the various airframe manufacturers Type Certificate (TC) or by Supplemental Type Certificate (STC).

21. Install Propeller Spinner

22. Start engine I.A.W Pilots Operating Handbook and FAA

23. Perform propeller dynamic balancing ref. C208B MM chapter 61-11-00 Dynamic balancing (McCauley) - Adjustment test. Refer also to related balancer tools manual.

24. Make an appropriate entry in Work Order and Aircraft Flight & Maintenance Log (AFML).

User/Installer Responsibilities

It is important to understand that the existence of this document alone does not automatically constitute authority to install the aircraft engine/propeller/article.

Where the user/installer performs work in accordance with the national regulations of an airworthiness authority different than the airworthiness authority of the country specified in Block 1, it is essential that the user/installer ensures that his/her airworthiness authority accepts aircraft engine(s)/propeller(s)/article(s) from the airworthiness authority of the country specified in Block 1.

Statements in Blocks 13a and 14a do not constitute installation certification. In all cases, aircraft maintenance records must contain an installation certification issued in accordance with the national regulations by the user/installer before the aircraft may be flown.
